INFORMATION ON

Creation of print data

**In order to ensure an optimal process in the processing of your data
you should consider the following points when preparing or creating the data:**

Bitmap images embedded in the document should be in final format
- Size 1:1, 100dpi
- Size 1:10, 1000dpi

PDF documents

Please convert and save this as a **PDF/X3** with a **15mm bleed** all around and **without crop marks**
(Disable image compression). Color profile/output in FOGRA39.

Fonts and Logos:

Please deliver logos as vector data and deliver fonts converted into paths,
unless text changes are desired / planned.
To avoid delays and misprints, please make sure that all imports and fonts
for the respective output document are included.

Photoshop

As EPS format / tif / psd / jpeg.
Color mode CMYK (do not pre-separate images).

Illustrator

As illustrator .eps or .ai (images embedded).
Please also deliver the imports integrated in the document.

InDesign

Please also deliver the imports integrated in the document.

Data transmission

For larger data, please use a file hosting service such as WeTransfer.
